

Step up your crushing

Introducing the new CH442
and CH662 cone crushers
from Sandvik

The advances you need from the crushers you trust

The new CH442 and CH662 has been strengthened where it matters most to minimize unplanned interruptions and ensure consistent high performance.

New user-friendly automation, together with a backing compound-free design, ensures faster liner changes and less waiting time, while longer wear life, a small footprint, and more efficient operation reduce overall costs and support a more sustainable business.

Stepping up where it matters most

Sandvik CH442 and CH662 cone crushers have been updated in key areas to make crushing simpler, safer and more cost-effective—and to contribute even better to the overall efficiency and profitability of your operation.

New backing compound-free design

The compound-free design ensures easier liner changes and reduced downtime by avoiding the up to 24h hardening time compound typically require before you are up and running again.

New strengthened top shell and a new main shaft

An improved top shell design features 10% more weight and better material distribution, together with a new main shaft contributes to the reliability you need for maximum crusher availability.

New long life spider bushing

The new spider bushing has been re-engineered to extend the lifetime compared to previous designs. It also now comes with an integrated temperature sensor connected to the automation alarm systems.

New ACS-c 5 ASRi automation

The new CH442/CH662 comes with user-friendly ACS-c 5 ASRi automation for crusher control, including proven automated setting regulation and assigning role-based permissions for system monitoring, troubleshooting and performance optimization.

Connectability to SAM digital services

CH442/CH662 cone crushers are connectable to SAM digital services for ongoing real-time and aggregated data-based insights, on-the-go overview of fleet and part status, online troubleshooting, and much more.

Choose the step that best fits your operation.

New: Buy a fully integrated smart CH442/CH662 cone crusher, ready to run from day one.

Retrofit: Upgrade your existing CH440/CH660 with a CH442/CH662-grade top shell, main shaft and optionally the new ACS-c 5 ASRi automation.

Reborn: Transform your worn-out Sandvik crusher into the new CH442/CH662 while keeping existing auxiliaries and infrastructure – backed by a three-year standard warranty.
